

How to View Guides in Different Languages

This guide demonstrates how to view guides in different languages.

Written By: Dozuki System

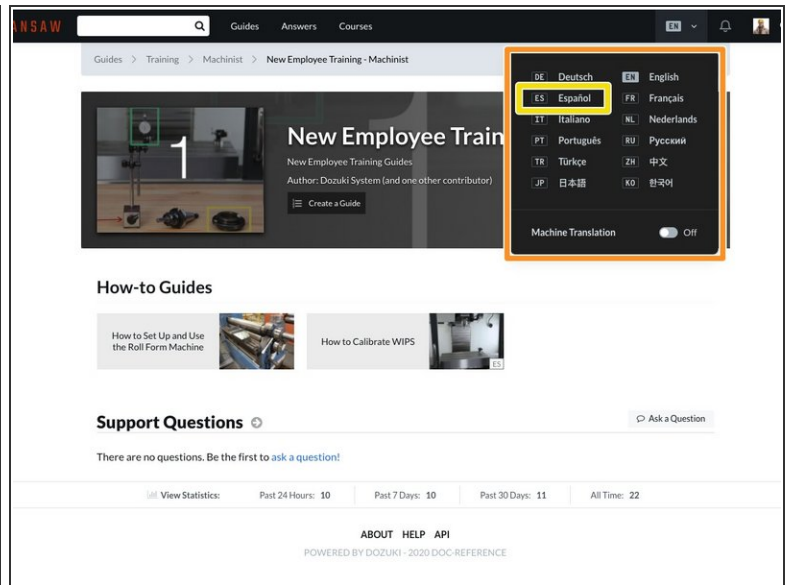

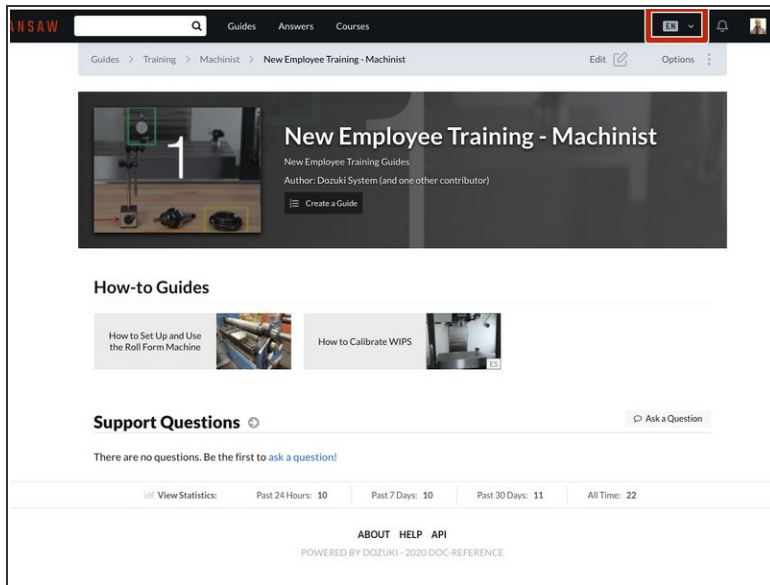

INTRODUCTION

This guide demonstrates how to view **Guides** in different languages.

Note: There are two types of language control:

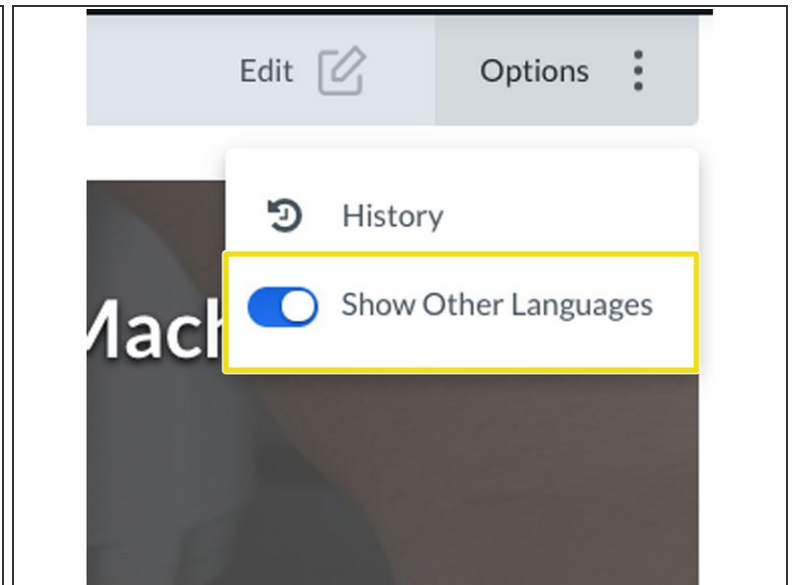

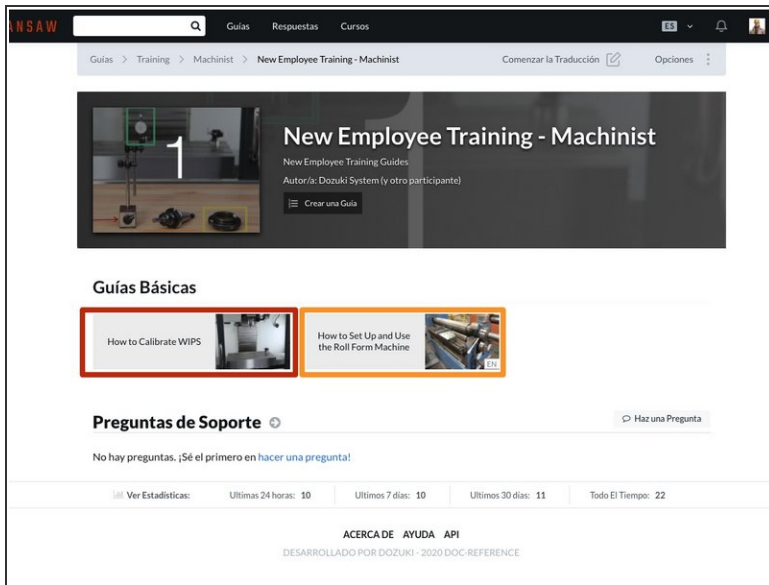

- **Site Language** controls the language of the site interface. Any language selections made in the Site Language control will apply to the entire site. This can be changed on any page of the site. Please refer to the guide [How to View Your Dozuki Site in Multiple Languages](#) for instructions on how to do this.
- **Guide Language** controls apply only to the guides. There is a language selection dropdown menu on the guide header that allows you to view your guides in all available languages. This dropdown menu will allow you to select other languages so you can view all available content without having to change the Site Language.

Step 1 — How to View Guides in Different Languages

- Go to the category that contains the guide(s) you wish to view in another language.
- Locate the language menu on the right end of the site header, with an arrow pointing downwards next to it.
- Click on the language menu, in the site header to expand the language drop-down menu.
- Select the language you wish to view the guides in.

Step 2

- The guides available in your desired language will now be displayed underneath the How-To Guide header.
 - ① Here in Spanish, *Guías Básicas*.
- If a guide was not written in the selected language, it will be placed at the end of the guide list, with a Language ID reflected on the thumbnail showing the written language.
- If you do not want to view guides written in the selected language, you can hide them by toggling the **Show Other Languages** switch located in Options from the subheader.
